Activity 3 Worksheet - Disclosure Control and Crosswalk

Exact procedure

1. Open mock-data/mock-data.csv. Flag stale records older than the reporting cadence and estimates without a documented method.

2. Create a trace for each metric: source → transformation/calculation → reviewer → disclosure location → retained evidence.

3. Map each metric to the relevant requirement: IFRS S1 governance/strategy/risk/metrics, IFRS S2 climate metrics, GRI topic standard, and SGX climate reporting provisions.

4. Score control risk: likelihood (1-5) × disclosure impact (1-5). Scores ≥15 require escalation before disclosure; 8-14 require remediation; ≤7 monitor.

5. Design the control in six fields: owner, frequency, input, action, retained evidence, escalation threshold.

6. Write the assertion boundary: “Based on [records] for [period/entity boundary], management can assert [claim]; [limitation] remains.”

Metric	Source	Requirement	Gap	Risk score	Control	Owner	Assertion / limitation
