Circularity and Decarbonisation Portfolio

Suggested time: 35-60 minutes

Executive brief

Build a circular material flow and a sequenced emissions-reduction portfolio.

Deliverable

Prepare a one-page decision record containing the recommendation, calculation, evidence sources, assumptions, control owner, approval condition and residual uncertainty.

Procedure

1. Inspect mock-data/mock-data.csv; confirm units, time period and boundary.
2. Identify missing, estimated or stale evidence.
3. Apply the calculation or prioritisation rule described in the Learner Guide.
4. Test at least one alternative assumption.
5. Record the decision and the conditions that must be satisfied before external reporting.
6. Peer-review the work: another group must be able to reproduce the result.

Acceptance criteria

- Every claim traces to a named mock-data row or cited source.
- Units and formulas reconcile.
- Thresholds and assumptions are explicit.
- The recommendation states commercial, ecological and community implications.
- No personal data or completed learner record is used.
